Acceptance Test Release Document
Team Name: Adult Friend Locator
Acceptance Test Date: March 21, 2017
Revision Date: 3/16/17

Acceptance Test Script

1) Register a new user; logout to show login functionality
2) Search for user and add as friend
3) Have this friend accept the request.
4) Request users locations.
5) Have this user accept the location.
6) View the map for a friends viewable location
7) Stop sharing location with friend.

Completed User Stories

- As an adult with friends, I want to be able to access this service through a nice adult-oriented framework.
- As an adult with friends, I want to be able to create an account to connect with my adult friends, for convenient communication capabilities.
- As an adult with friends, I want to be able to easily share my location with my friends.
- As an adult with friends, I want to be able to find individual users on the app so I can get their location and find them in the real world.
- As an adult with friends, I want to be able to quickly and easily see my adult friends location while on the move.
- As an adult with friends, I want to be able to control {who sees my location, which adults can access/request my location, which adults I send my current location}, because I don't like some of my adult friends and do not wish for them to know where I am.
- As an adult with friends, I want to be able to receive notifications on people's locations.
- As a adult with friends trying to find their friends, I want the app to help me find them visually or on the app map because I'm directionally challenged.

Known Bugs

- Application sometimes does not build correctly on a physical device due to unstable platforms (e.g., AirBnB maps, Android Studio, MongoDB, etc.).
- If the server is spammed too many times within a short period of time, certain buttons and actions will crash the server because of Mongoose..
- Location symbols sometimes do not show up because of React Native's caching issue.
- Due to slow emulator speed, rapidly clicking on buttons or spamming actions repeatedly before the emulator can process them can crash the server due to race condition issues.
- Extremely slow internet speeds may result in the displaying of incorrect information due to race condition issues.

Sprint Documents

All of our sprint documents is located in our team's Github repository inside the "Deliverables" folder (Github link:
